BUSINESS ENQUIRIES

Oil & Gas • Petrochemical • Power

Water • Infrastructure • Pipelines

Fabrication • Maintenance • EPC Support

Built on experience. Designed for performance.

A new-generation contracting company backed by decades of field, engineering and project leadership.

Engineering Experts is an industrial construction, fabrication and maintenance company established to serve clients that demand disciplined execution, technical competence and dependable site performance.

While the company is new, its operating philosophy is not. Our leadership brings extensive experience across the Middle East and India, with exposure to oil & gas production facilities, water injection and treatment systems, power infrastructure, pipelines, storage facilities, plant maintenance and multi-discipline construction.

We combine that experience with a modern, accountable delivery model: clear scope definition, controlled execution, strong HSE, quality assurance, transparent communication and a focus on long-term asset reliability.

Our operating promise

Safe execution Every task begins with risk understanding, competent supervision and the controls required to protect people, assets and the environment.	Technical discipline Engineering, fabrication and field execution are coordinated to reduce rework, improve constructability and support reliable handover.
Responsive delivery We structure teams and resources around client priorities, shutdown windows and operational constraints.	Long-term value Our objective is not simply to complete a scope, but to leave the client with a safer, more reliable and maintainable asset.

One partner across the asset lifecycle

46+
YEARS
Management experience across
India & the Middle East

MEA
REGION
Operating focus across Middle East
& Africa

INDIA
MARKET
Engineering, fabrication and
execution capability

01
DELIVERY MODEL
Construction • fabrication •
maintenance • commissioning

What we bring

Industrial fabrication Steel structures, equipment skids, pipe spools, platforms and site-ready assemblies.	Mechanical capability Installation, alignment, piping, equipment fit-up, maintenance and refurbishment.
Project execution Planning, procurement support, subcontractor coordination, construction management and handover.	Commissioning support Testing, verification, punch-list closure, system turnover and operational readiness support.
HSE leadership Risk-based planning, permit-to-work discipline, competent supervision and continuous field engagement.	Quality assurance Inspection and test planning, material traceability, welding controls and documented turnover dossiers.

Geographic focus

Our business model is designed for projects and partnerships across the Middle East & Africa (MEA) and India, supported by experienced leadership and a flexible project delivery network.

Experience is our starting advantage.

Engineering Experts was created with a simple ambition: to bring experienced industrial execution leadership into a more agile contracting platform. We are building the company around the standards expected by major energy and industrial operators, without the unnecessary layers that can slow decision-making.

Our leadership experience spans production facilities, water injection, water treatment, power transmission, storage tanks, sewage treatment, civil works, plant maintenance, rotary and static equipment, pipelines and multi-discipline technical teams.

We approach every opportunity with the same discipline: understand the client's operating environment, define the work clearly, identify the risks early, mobilize the right competencies and control quality from the first activity through final handover.

What makes our model different

01	Management experience without legacy bureaucracy The company is new, but our leadership brings decades of practical engineering and construction experience — mature decision-making in a responsive organization.
02	Field-first engineering We focus on constructability, maintainability and operational realities, not engineering in isolation from the site.
03	Safety and quality embedded in delivery HSE and QA/QC are treated as execution disciplines, with controls planned into the work rather than added after the fact.
04	Partnership mindset We aim to earn repeat work through reliable performance, transparent communication and a clear understanding of client priorities.

We strive, so you thrive.

Vision

To be the trusted leader in heavy-industry construction and maintenance — recognized for engineering excellence, zero-incident performance, and long-term value delivered across every project we take on.

Mission

Engineering Experts delivers world-class construction and maintenance solutions to the heavy-industry sector, built on uncompromising safety, technical excellence and operational integrity.

“Safety isn't a priority here. It is the foundation everything else is built on.”

Core values

01 Safety First Every project, every site, every day — safety comes before schedule.	02 Integrity We do what we say, communicate openly and stand behind the work we deliver.
03 Innovation Practical, cost-conscious solutions informed by field experience and modern engineering.	04 Client Satisfaction Long-term partnerships, not one-off contracts.

Leadership grounded in the field

Mr. Bazil Dexter Rebello

CEO & Founder | Mechanical Engineer | 46 Years of Industry Experience

Mr. Bazil Dexter Rebello brings 46 years of engineering, construction and maintenance experience across India and the Middle East. His career has included major operating environments and multidisciplinary projects spanning production facilities, power, water treatment, injection systems, storage, pipelines, civil works and plant maintenance.

Academic & professional background

- B.Sc. (Open University), Trinity College & University — Delaware, USA
- Diploma in Mechanical Engineering, St. Mary's Engineering Institute, Dadar — Bombay

Countries of professional experience

India • United Arab Emirates • Oman • Qatar • Kuwait • Saudi Arabia

Selected major-company experience

Petroleum Development of Oman (PDO) Production facilities, power and water systems, oilfield construction and maintenance environments.	Daleel Petroleum Maintenance and construction management, production facilities, water injection, water treatment and multidisciplinary site operations.
Qatar Gas Industrial and oil & gas project exposure, construction and maintenance environments.	Kuwait Power Plant Power-generation infrastructure and mechanical operating environment.
NOCIL — Belapur Industrial manufacturing / process plant exposure.	BPCL — Mumbai Downstream petroleum and industrial operating environment.

Selected project & leadership experience

- Sadad Production Station — PDO
- Hubara Power Plant — PDO
- Mukhiazna Production Station — PDO
- Bhaja Production & Oil Gathering Facility — PDO
- Lead role / coordinator in extinguishing the Zuliyah-16 oil-well fire with Wild Well Control; the fire was extinguished after 40 days
- Construction of Daleel Petroleum's B-Block Production Facility and management of ongoing maintenance
- Construction and maintenance of a deep-water injection facility with Waukesha engine-driven injection pumps
- Construction of water treatment facilities and management of rotary and static equipment maintenance
- Construction and management of a 33 kV overhead power transmission line
- Management of civil construction and maintenance for drilling-location pads and gravel-packed roads
- Management of multidisciplinary service contractors, bidding/tendering and technical design-office coordination
- Construction and management of sewage treatment plant facilities
- Construction and management of oil and water storage tanks in Qatar and Kuwait

Built for demanding industrial environments

Our capabilities are structured around the operating realities of heavy industry: safety-critical work, complex interfaces, tight shutdown windows, brownfield constraints and the need to protect production.

01 Oil & Gas Construction, fabrication and maintenance for upstream and downstream operations, built for demanding field conditions.	02 Petrochemical Reliable engineering and maintenance support for facilities where safety and precision are non-negotiable.
03 Power Plants Construction, maintenance and mechanical support for power-generation facilities to keep operations running reliably.	04 Water Treatment Plants Engineering and maintenance support from construction through ongoing plant support.
05 Infrastructure Broad construction and maintenance capabilities supporting heavy-industry infrastructure projects of varying scale.	06 Pipeline Construction & Commissioning End-to-end pipeline delivery, from initial construction through system commissioning.
07 Water Injection Plants Specialized construction and maintenance support for enhanced oil-recovery injection systems.	08 Storage & Disposal Facilities Construction of oil, fire-water and produced-water storage and disposal facilities to applicable standards.
09 Production Facility Maintenance Maintenance of production facilities alongside refurbishment of rotary and static equipment.	

From steel to startup

Our service portfolio supports greenfield, brownfield, maintenance and shutdown requirements — with the flexibility to act as a specialist contractor, multidisciplinary package contractor or EPC support partner.

01

Industrial Fabrication

Custom fabrication of steel structures, platforms and equipment skids, with in-house cutting, welding, assembly, quality checks and material traceability.

02

Structural Fabrication

Design-to-build fabrication of structural steel frameworks and support systems, with pre-assembly and fit-up checks for site-ready delivery.

03

Oil & Gas Equipment Fabrication

Fabrication of tanks, process equipment and other oil & gas equipment to applicable codes and client specifications.

04

Pipeline Fabrication & Installation

Fabrication and welding of pipe spools, flowlines and pipeline sections, plus installation, tie-ins, testing and commissioning support.

05

Maintenance & Shutdown Services

Planned and emergency maintenance, turnaround and shutdown planning, and multidisciplinary support aimed at minimizing downtime.

06

Equipment Refurbishment

Inspection, overhaul and refurbishment of rotating and static equipment, with post-refurbishment testing before return to service.

07

Mechanical Works

Installation, alignment and commissioning of mechanical equipment and systems, plus preventive and corrective maintenance.

08

EPC Support Services

Engineering, procurement and construction support across project phases, including bidding, technical documentation and project management.

09

Installation & Commissioning

On-site installation of fabricated equipment and systems, pre-commissioning checks, testing and commissioning to operational status.

A controlled path from scope to handover

01	Understand Confirm scope, specifications, site conditions, interfaces, schedule drivers and acceptance criteria.
02	Plan Develop execution methodology, resource plan, procurement requirements, schedule, risk controls and ITPs.
03	Mobilize Deploy competent personnel, equipment, materials, permits, welfare arrangements and site controls.
04	Execute Control work fronts through disciplined supervision, HSE engagement, quality checks and progress monitoring.
05	Verify Test, inspect, document, close punch items and verify systems against contractual and technical requirements.
06	Handover Compile records, as-builts / redlines, test packs, certificates, dossiers and client handover documentation.

Project controls

Scope control Clear work packs, responsibilities, deliverables and change-control discipline.	Schedule control Look-ahead planning, milestone tracking and early escalation of constraints.
Cost awareness Resource planning, material control and productivity monitoring.	Interface management Coordination across client, engineering, vendors, subcontractors and operations.
Documentation Controlled technical, quality, HSE and handover records.	Lessons learned Post-job review to capture improvements and strengthen future execution.

Safety is the foundation

Engineering Experts is committed to protecting people, assets, the environment and the communities in which we work. We seek to prevent incidents through planning, competent execution, visible leadership and continuous improvement.

Our HSE principles

Leadership & accountability Managers and supervisors set expectations, provide resources and demonstrate safe behavior.	Risk-based planning Hazards are identified before work begins through risk assessments, method statements and JSAs.
Competence Personnel are selected, inducted, trained and authorized to the risks of their work.	Permit to work High-risk activities are undertaken under applicable permit, isolation and authorization systems.
Stop-work authority Every worker may stop an unsafe activity without fear of retaliation.	Emergency preparedness Response arrangements, drills and escalation processes are established for site scenarios.

Critical-risk focus: work at height • lifting operations • confined spaces • hot work • excavation • electrical isolation • line breaking • pressure testing • hazardous substances • simultaneous operations • vehicle movements • energy isolation / LOTO • working near live plant.

Quality built into the work

Our quality approach makes requirements visible, measurable and verifiable from procurement through fabrication, installation, testing and handover. Project-specific Quality Plans and Inspection & Test Plans (ITPs) will be developed where required by the contract.

Quality management framework

- Requirements — translate drawings, specifications, codes and client requirements into controlled work and inspection requirements
- Materials — control receiving inspection, identification, certificates, traceability, storage and preservation
- Welding & fabrication — qualified procedures and competent personnel; controlled weld maps, consumables and fit-up
- Inspection & testing — planned hold/witness points, dimensional checks, NDT, pressure testing and functional verification
- Non-conformance — identify, segregate, evaluate, correct and close non-conforming work through documented processes
- Turnover — inspection records, certificates, test packs, punch lists and final dossiers for handover

Applicable standards & codes

Depending on project scope, design basis and client specifications, work may be executed to applicable requirements such as ISO management-system principles, ASME, API, AWS, ASME B31.3/B31.4/B31.8, ASTM and relevant local statutory requirements. The governing project specification and applicable jurisdiction will always determine the final requirements.

Important: the company will only state specific ISO, API, ASME or other certifications once the relevant certification or authorization has been formally obtained.

Responsible industrial delivery

We recognize that industrial construction and maintenance have an environmental and social footprint. Our approach integrates practical environmental controls into planning and execution, while helping clients maintain reliable assets and reduce avoidable waste.

Waste hierarchy Reduce waste at source, reuse where practical, segregate waste streams and ensure authorized disposal or recycling.	Spill prevention Appropriate storage, secondary containment, inspection and response arrangements for oils, fuels and chemicals.
Energy & resources Plan equipment use and work methods to reduce unnecessary fuel, electricity and water consumption.	Pollution prevention Control dust, noise, emissions, wastewater and other site impacts per project requirements.

We also aim to create respectful workplaces, support local employment where feasible, develop workforce competence, respect neighboring communities, and treat sustainability as an operational discipline — measuring performance and continuously improving how work is planned and executed.

Technical capability

Our technical model connects engineering requirements to field execution. Where engineering design is within our contracted scope, we coordinate the appropriate disciplines and ensure construction requirements are considered early.

Mechanical Equipment installation, alignment, piping, rotating and static equipment maintenance, refurbishment and commissioning support.	Piping Spool fabrication, fit-up, welding, installation, tie-ins, pressure testing, flushing and commissioning.
Structural Steel frameworks, platforms, pipe racks, stairs, walkways, supports and equipment structures.	Fabrication Cutting, fit-up, welding, assembly, inspection, traceability and site-ready delivery.
Civil support Foundations, equipment pads, roads, drainage and associated industrial civil works where within scope.	E&I coordination Interface management and multidisciplinary coordination for electrical and instrumentation scopes.
Project management Planning, scheduling, resource coordination, procurement support, subcontractor management and reporting.	Commissioning System verification, testing support, punch closure, turnover packages and operational-readiness support.

Where our capabilities connect

Capability	Fabrication	Installation	Maintenance	Testing	Commissioning
Structural steel	●	●	●	—	—
Equipment skids	●	●	●	●	●
Pipe spools / pipelines	●	●	●	●	●
Tanks / storage	●	●	●	●	●
Rotary equipment	—	●	●	●	●
Static equipment	●	●	●	●	●
Water injection systems	●	●	●	●	●
Water treatment facilities	●	●	●	●	●
Power-plant mechanical scopes	●	●	●	●	●
Shutdown / turnaround scopes	●	●	●	●	●

Delivery formats

Specialist package A defined fabrication, mechanical, pipeline, refurbishment or commissioning package.	Multidiscipline contractor Integrated teams across multiple work fronts with one accountable execution interface.
EPC support partner Construction, procurement, project controls and field support within a larger EPC delivery structure.	Maintenance partner Planned maintenance, shutdowns, corrective work and long-term asset support.

A contractor built around client confidence

01 Experienced leadership Decades of field and management experience inform our execution philosophy.	02 Safety by design HSE controls are considered during planning, not after work has started.
03 Execution discipline Clear work packs, competent supervision, inspection points and controlled handover.	04 Brownfield awareness Live facilities demand interface control, isolation discipline and careful sequencing.
05 Flexible delivery We can support defined packages or broader multidisciplinary scopes.	06 Transparent communication Progress, constraints, risks and changes are communicated early and clearly.
07 Asset-minded maintenance We focus on reliability, maintainability and extending useful equipment life.	08 Long-term partnership We measure success by repeat confidence, not simply completing a single contract.

New company. Mature execution mindset.

Engineering Experts is at the beginning of its corporate journey. We do not present a list of completed projects that does not yet exist. Instead, we present the experience, technical leadership and delivery systems that will underpin the projects we are trusted to execute.

What clients can expect from day one

Senior involvement Leadership remains accessible and engaged in project-critical decisions.	Mobilization readiness Project-specific mobilization plans, organization charts, competency requirements and resource schedules.
Partner network Use of qualified specialist vendors, subcontractors and service providers where required by scope.	Document control Defined registers and controlled records for technical, HSE and quality documentation.
Prequalification readiness Structured company information for client vendor registration and contractor prequalification.	Performance transparency Clear KPIs and reporting for safety, quality, schedule, productivity and commercial performance.

Health, Safety & Environment Policy

Engineering Experts is committed to conducting its activities in a manner that protects people, property and the environment. We believe all incidents are preventable through effective planning, competent execution, strong leadership and continuous learning.

- Comply with applicable legal, regulatory, client and project-specific HSE requirements
- Identify hazards and assess risks before work begins and whenever conditions change
- Provide competent personnel, appropriate supervision, training, information and resources
- Maintain safe systems of work for high-risk activities — permit-to-work, isolation, lifting, work at height, confined space, hot work and excavation as applicable
- Provide and enforce the use of appropriate PPE and site controls
- Maintain emergency preparedness and response arrangements appropriate to the work and location
- Investigate incidents and near misses, identify root causes and implement corrective and preventive actions
- Encourage every employee and contractor to report hazards and exercise stop-work authority

Policy ownership: CEO / Managing Director • Review: annually and whenever significant organizational, legal or operational changes occur.

Quality Policy

Engineering Experts is committed to delivering work that conforms to contractual, statutory and technical requirements and meets client expectations, through disciplined planning, competent personnel, controlled processes and continuous improvement.

- Understand client requirements before committing to execution
- Use controlled drawings, specifications, procedures and work instructions appropriate to the project
- Procure and handle materials in a manner that protects conformity and traceability
- Plan inspection and testing activities and maintain objective evidence of conformity
- Control non-conforming work and verify corrective actions before closure
- Maintain accurate, retrievable project records and handover documentation

Quality is the responsibility of everyone involved in the work — from estimating and procurement to fabrication, installation, inspection and handover. We are committed to honest tendering, transparent communication, and zero tolerance for falsification of records, bribery or deliberate concealment of non-conformance.

READY FOR THE NEXT PROJECT.

Whether you require a fabrication package, pipeline scope, plant maintenance team, equipment refurbishment, shutdown support or a broader construction partner, Engineering Experts is ready to discuss your requirements.
