

Customer Case Study

# Migrating our ERP System to the Cloud with HyperMotion Significantly Boosted our Efficiency

How SynthAsia moved its core ERP system off local VMware and onto Huawei Cloud — automated, agentless, and without interrupting the business.

Zero business interruption

Agentless migration

One-click boot in cloud

## THE CHALLENGE

Costly local VMware licensing, an ERP system too intricate to redeploy by hand, and no cloud migration experience in the team.

## THE SOLUTION

HyperMotion agentless hot backup migration to Huawei Cloud, driven end to end by a three-step wizard.

## THE RESULT

The ERP system reached the cloud without business interruption, with less manual work and a shorter timeline.

### INDUSTRY

Medical Care

### SCENARIO

VMware to Cloud

### PRODUCT

HyperMotion

### TARGET CLOUD

Huawei Cloud

SynthAsia × OnePro HyperMotion

VMWARE → HUAWEI CLOUD · ERP SYSTEM MIGRATION

OnePro

## A healthcare innovator held back by its on-premises virtualization

SynthAsia Group was established in 2011 and officially founded in China in 2021. The organization focuses on advancing holistic health through nutrition, lifestyle, medicine and Eastern philosophy, offering localized healthcare consulting and solutions while advocating comprehensive health practices.

As the business grew, its local VMware-based virtualization infrastructure became a bottleneck in a fast-moving healthcare sector. Every expansion brought higher costs and more operational complexity. SynthAsia chose OnePro's HyperMotion cloud migration tool to move its ERP system to Huawei Cloud.

---

### *Customer Challenges*

## Three obstacles standing between the ERP system and the cloud

### 01 High cost and maintenance of local virtualization

The ERP system ran on a local VMware environment with costly licensing, ongoing hardware maintenance and looming expiration pressure. Moving to public cloud infrastructure was essential to reduce the operational burden.

### 02 Complex and costly redeployment

The ERP system's intricate configurations would have required substantial manual intervention to rebuild in the cloud, making the migration long and expensive.

### 03 Lack of migration expertise

The in-house IT team had no cloud migration experience, which made outcomes hard to predict and increased the risk of delays and inefficiency.

# HyperMotion: fully automated migration from VMware to Huawei Cloud

OnePro deployed HyperMotion to carry SynthAsia's ERP system — system, application and data resources — from the local VMware environment onto Huawei Cloud, with the migration workflow automated end to end.

## 01

### One-click boot in cloud technology

HyperMotion calls Huawei Cloud's API interface to run the migration with minimal human intervention, automating instance creation, system installation and disk formatting.

## 02

### Agentless mode for secure data migration

No agent has to be installed on the source systems, so system, application and data resources move out of the VMware environment securely and seamlessly.

## 03

### Hot backup migration for business continuity

The Rehost migration method supports whole-machine hot backups with block-level incremental replication, keeping data transfer fast, secure and fully automated.

## 04

### Simplified wizard-style interface

A three-step wizard — select hosts, synchronize data, start migration — gives the IT team a smooth experience without specialist migration skills.

---

The result: an ERP migration that SynthAsia's own IT team could run confidently — no migration specialists required, and the production system stayed online throughout.

## A migration that kept the business running

### 01 Business continuity

Hot backup migration ensured uninterrupted operations — the ERP system kept serving the business while the data moved.

### 02 Simplified process

Automation removed most of the manual work and reduced the operational complexity of rebuilding a highly configured ERP environment in the cloud.

### 03 Improved efficiency

The intuitive interface and streamlined workflow accelerated the migration timeline, even without prior cloud migration experience in the team.
