SYNCARI

Keep SAP. Extend Its Reach.

SAP governs your SAP data. Syncari governs everything else - and connects it all back in real time.

Automate Data Quality

Detect and remediate issues in non-SAP systems before they reach SAP workflows - automatically.

Multi-Directional Sync

-200 SAP object types. Real-time sync across S/4HANA, ECC, and every connected system.

AI-Ready Master Data

Clean, enriched, governed data delivered to analytics and LLM pipelines from every domain.

The Challenge

Most enterprises run SAP alongside Salesforce, Workday, NetSuite, and other systems. SAP's native governance tools manage SAP data with precision. But the broader data estate operates without the same controls - and quality issues originating outside SAP propagate across systems, surface as broken reports and failed AI models, and create manual reconciliation work that slows every team down.

How it works

1. Connect

Low-code Sync Studio maps SAP objects in hours. No heavy IT lift.

2. Govern

Enforce quality rules and lineage across SAP and non-SAP domains.

3. Sync

Changes propagate instantly. No batch jobs. No stale data.

4. Activate

Feed trusted data to AI, analytics, and business workflows.

Supported SAP Integrations

SAP System	Supported Objects	Integration Mode
SAP S/4HANA	-200 object types	Bidirectional, real-time
SAP ECC	Customer, vendor, material masters	Bidirectional, real-time
Non-SAP systems	CRM, cloud apps, third-party data	Multi-directional sync

Key Capabilities

Data Quality & Governance

- ✓ Continuous monitoring and automated remediation across all connected systems
- ✓ Enforce policies, lineage, and auditability beyond SAP
- ✓ Issues caught at the source before reaching SAP workflows

SAP Coexistence & AI Readiness

- ✓ Designed to extend SAP governance, not replace it
- ✓ Hybrid and multi-cloud SAP support — no replatforming
- ✓ MCP Server support for LLM agent frameworks and AI pipelines
