

FOR IMMEDIATE RELEASE

SOUNDRAW Launches Space Music: AI-Generated Background Music for Commercial Spaces

Tokyo-based AI music company brings adaptive, fully licensed soundscapes to gyms, hotels, and retail — starting from \$15/month per location

Tokyo, Japan, June 2026 - SOUNDRAW, the Tokyo-based AI music company known for its ethical approach to generative audio, today announced the launch of Space Music, a subscription service that brings AI-generated background music to commercial spaces worldwide. Following successful first trials with businesses in the United States and Japan, Space Music is now available globally starting from \$15/month per location.

Space Music is designed for any business where atmosphere matters: gyms, yoga studios, hotels, retail stores, restaurants, and coworking spaces. Unlike traditional music licensing, which requires costly royalty agreements and manual playlist management, Space Music delivers fully licensed, AI-generated audio that adapts to the mood and energy of a space. No playlists, no licensing headaches, no per-track fees.

"Background music is one of the most underestimated tools in a business's experience design," said Daigo Kusunoki, CEO of SOUNDRAW. "Our trials in the US and Japan showed that businesses want music that works for them. Flexible, affordable, and legally clear. Space Music delivers exactly that."

Key features of Space Music:

- AI-generated, royalty-free music customisable by mood and energy level
- Fully licensed for commercial use with no per-track fees
- Available from \$15/month per location
- No playlist management required
- Built on SOUNDRAW's ethical AI engine, which generates original compositions without scraping copyrighted music or imitating existing artists

Space Music joins a growing suite of products from SOUNDRAW, which also recently launched a Music API for developers and an ethical AI music app for iOS and macOS. The company previously announced a partnership with LG Electronics to integrate AI-generated music into LG's global WebOS digital signage network.

Space Music is available now at soundraw.io/spacemusic.

About SOUNDRAW

Founded in Tokyo in 2020, SOUNDRAW is an AI music company building ethical, royalty-free generative music tools for creators, developers, and businesses. SOUNDRAW's technology generates original compositions from scratch without relying on scraped music catalogues or imitating existing artists. Its products include a consumer music creation platform, a Music API for developers, and Space Music for commercial spaces.
