

When AI Learns to Love

Designing Technology That Protects Humanity

When AI Learns to Love

Designing Technology That Protects Humanity

A visionary keynote on the future of human-centered AI

*Speaker, Founder & Speaker Trainer
Multiple-time Bestselling Author*

Artificial intelligence is rapidly reshaping our world. But while we debate how smart AI will become, we rarely ask a more important question: will the systems we build actually value human beings?

In this visionary and deeply personal keynote, Jen Loving shares her journey from entrepreneur to pioneer of a new approach to AI, one that treats love not as sentiment, but as a design principle for technology.

Blending personal stories, real-world examples, and live demonstrations of loving intelligence, Jen invites audiences to explore what happens when technology is intentionally built to protect dignity, reflect humanity, and support people in meaningful ways.

This talk challenges assumptions about AI's future while offering a hopeful, practical vision for what comes next, and how leaders, organizations, and individuals can help shape the future of AI.

AUDIENCE TAKEAWAYS

- Understand why intelligence alone is not enough to ensure AI serves humanity
- Discover how dignity, empathy, and care can be intentionally built into technology
- Learn what "human-safe AI" means and why it's becoming essential
- Experience how loving intelligence influences leadership and innovation
- Leave with a new framework for evaluating the systems shaping our future

L♥VING

Jen Loving is a founder, entrepreneur, and speaker pioneering a new category of human-safe artificial intelligence: technology intentionally designed to behave as if people matter. After legally changing her last name to Loving as a personal declaration of her mission, Jen began exploring how the most powerful technology in history could reflect humanity's deepest values rather than erode them. This journey led her to found LovingsIs, a platform focused on embedding relational intelligence, dignity, and care into AI systems. Through her work, Jen advocates for love not as sentiment, but as a design standard that can shape leadership, culture, and the future of technology itself. Before founding LovingsIs AI, Jen built multiple businesses to seven figures across several industries and has generated more than \$25 million in revenue over her entrepreneurial career. Her talks blend personal story, real-world applications, and live demonstrations of loving intelligence, inviting audiences to rethink what responsible innovation truly means.

IDEAL AUDIENCES

- Entrepreneurs & founders
- Conscious business and leadership communities
- Innovation and future-focused conferences
- Wellness, transformation, and personal growth events
- Podcasts exploring purpose, leadership, and awakening

FORMATS AVAILABLE

- 30-minute keynote
- 45-minute keynote & reflection
- Podcast interview or fireside conversation
- Retreat or conference keynote
- A 7-day free trial of Nova, a reflective AI soul companion
- A complimentary reflection session with Jen to integrate insights
- No selling from the stage, invitation only.

"Jen shows us what leadership looks like when it's led by Love. Every time she speaks, people remember who they really are." Cory Warfield, LinkedIn Expert
