

The Filcon Filtration miniature bag filter offers a practical, streamlined alternative to traditional central extraction systems. Its straightforward, functional design makes it easy to install directly on conveyors and bucket elevators.

SAVINGS

- The Filcon Filtration filter with an integrated fan operates only when the machine is running, resulting in energy savings and extended filter bag life.
- The Filcon Filtration filter is also offered without an integrated fan, allowing it to be connected to a larger central fan for even greater energy efficiency.
- As a budget-friendly, low-maintenance option, the Filcon Filtration filter provides significant savings through a reduced total cost of ownership.

FLEXIBILITY

- The Filcon Filtration filter works well as either a stand-alone solution or an extension to central extraction systems, allowing you to choose the setup that best fits your needs.
- New machines requiring dust extraction are equipped with individual Filcon Filtration filters, ensuring seamless operation without disrupting existing extraction systems.

BENEFITS

SPECIAL FEATURES

Ease of use

- Automatic pulse-jet cleaning
- Easy change of filter bags through a large inspection door
- Can be connected to a large central fan
- Simplified control of the aspiration system

Effective design

- Built-in fan to automatically adjust the quantity of aspiration air depending on the extent of the leak to regulate automatic cleaning

- Large suction intake with low admission speed to minimise turbulence and circulation of dust
- An electric control unit with adjustable pulse and pause time

APPLICATIONS

- Grain and feed industry
- Chemical industry
- Cement industry
- Food industry
- Brewery
- Paper industry
- Plastics industry
- Metal industry
- Fish feed industry
- Pet-food industry
- Recycling industry
- Wood industry
- Mineral industry
- Fertiliser industry
